

Divider Sheets

Beverage Containers ■ Food Containers ■ Health and Beauty Care Packaging ■ Pharmaceutical Packaging ■ Household Item Packaging

Divider Sheets provide maximum product protection and load stability for unitized loads of food, beverage and industrial products. When combined with plastic pallets and top frames, an efficient shipping system is created for storage and transport.

These reusable plastic Divider Sheets are placed between layers of aluminum, steel, glass and plastic cans or bottles used to package food and beverage products. They are also used in many industrial applications to protect items, including printed materials or automotive products.

Divider Sheets are available in solid and corrugated styles to meet diverse application needs. The non-sloughing, plastic design reduces product contamination that can occur from dust, fiber and splinters found in alternative sheet materials. Additionally, Divider Sheets are easily cleanable, using proprietary cleaning technologies.

Their reusability eliminates the packaging waste associated with the disposal of corrugated and solid fiberboard divider sheets.

To support high-velocity supply chains, Divider Sheets are also available on a rental basis, through pooling services.

ORBIS formed a joint venture with Cartonplast to create CORBI Plastics to offer pooling and logistics services.

Pooling eliminates the upfront investment of purchasing divider sheets. Cleaning, sorting and tracking services are also available. See page 116 for more information about CORBI Plastics.

Available in custom sizes and colors.

Solid and corrugated styles available.

Customer name and other specifications can be printed on sheets

100% recyclable. Contact your sales representative about ORBIS' Recycling Program.

Rounded corners

Consistent dimensions for use with automated systems.

Typical Sheet Sizes:

- 44" x 56"
- 40 x 48"
- 44.75" x 47.5"
- 45" x 47.5"
- 1000 x 1200 (mm)
- 1120 x 1300 (mm)
- 1120 x 1420 (mm)
- 1150 x 1250 (mm)
- 1180 x 1250 (mm)
- 1200 x 1350 (mm)

Silverstone Gardens Reduces Plant Damage with Plastic Divider Sheets

Silverstone Gardens, of Watervliet, MI, grows high-quality vegetables and flowers. They grow, store and ship potted products to brokers.

Silverstone Gardens used fiberboard divider sheets between layers of pots, for storage and handling. These sheets were not durable and did not perform well in the nursery environment. When wet, these sheets would fail and pots would fall inside each other, compacting the soil and causing costly damage to the plants.

After analyzing the application, ORBIS recommended the plastic .050mm 40" x 48" Divider Sheet. This cost-effective sheet is moisture-resistant, so Silverstone Gardens can re-use in their operation. The contoured, all-plastic sheet is easier for employees to handle. Within two weeks, the sheets were delivered and implemented at Silverstone Gardens, to meet their aggressive planting season.

- Reduced damage to plants and flowers
- Rapid return on investment
- Improved handling
- Cleaner environment
- Greater nursery efficiencies
- Improved storage capacity
